

Environment and Energy Policy

Purpose

In line with our HSE and ESG policies already established within the CGG group, and also with our CSR Strategy, we are determined to create value, develop and innovate responsibly, involving all our stakeholders: employees, customers, service providers, partners and local institutions.

Given the issues around climate change and its consequences, environmental and energy management is the right thing to do for Sercel, and we believe that it is a differentiator.

To achieve this goal, we rely on three major axes that reflect our commitment to environmental protection, resource preservation, energy conservation while remaining competitive:

Governance:

- Be up to date on our surveillance to optimize regulatory compliance
- Relentlessly pursue continuous improvement
- Leverage the Sercel Integrated Management System throughout Sercel and ensure that local actions are conducted according to its guidelines

Environment:

- Environmental protection and resource preservation (Reducing our waste, water consumption and pollution)
- Reduce our carbon impact

Energy:

- Learn more about our usage
- Reduce our consumption
- Use low carbon energy

By implementing this corporate policy, we affirm our commitment to ISO 14001 and ISO 50001, and we strive to be a responsible and sustainable player in our industry. We will be attentive to regulatory and technological developments to continue to improve our practices and meet the expectations of our stakeholders.

This policy will be regularly reviewed and updated to reflect our ongoing commitment to protecting the environment and to positively contribute to society.
